Category:Computer programming books Category:Computer science books Category:C++ booksQ: 2nd serve vs. 3rd serve I  
was wondering how much of a difference there really is between a 2nd serve and a 3rd serve in volleyball. I would assume that it  
is a lot, that it might be the difference between a win and a loss, but I guess it also depends on the situation. So, is there a  
difference at all? And if so, how big? A: It's a very big difference. Think about this: the serve is the game's most powerful  
weapon. If you're behind, you need to get it back in your favor and get the serve to your front row, or the game is already over.  
If you're in front, you need to get the serve to your front row, or you're done. So, yes, a 2nd serve (or 3rd, for that matter) can  
mean the difference between winning and losing. Additionally, you can always play not to lose (you can't win), which means  
trying to win before your opponent does. That can be achieved if you hit the 2nd or 3rd serve well. A: Yes, it's a big difference.  
An example: if you are up a game and a ball is just hovering above the net, and your opponent just isn't able to get it to you... it's  
just a matter of time until you win. It can mean the difference between winning and losing. If you lose this point, your chances  
of winning the game are low, if you win,
