Creating Layers Layers can be used to add complexity and depth to your images. Layers are a vital part of the Photoshop workflow because they make it easy to edit an image at any scale. If you were to think about creating a new layer every time you wanted to change the size of an image, you'd quickly become overwhelmed. Layers can be created in many ways. You can create a new layer from the Layers palette by selecting the Add Layer command, or you can simply double-click on the canvas of a document with an image on it. A new layer is created right beside your canvas. Layers are arranged on top of each other, with the top layer being closest to the canvas. The layers are organized into groups with the top group being the Visible group. You have the option of moving layers from one group to another.
